

BSCS

Biometric Staff Compliance System

Client Background

This is a multi-national food manufacturer, with a few manufacturing plants operating in Malaysia. Each plant is operated with around 1,000-1,200 staff.

Issues & Challenges Before BSCS

Before a worker is allowed into the manufacturing plant, he/she is required to meet all compliance, such as safety & hygiene training, typhoid injection, and validity of work permit.

Over the years, all staff compliance is being checked and recorded manually by security official, which had become an access bottleneck especially during change of shift, involving hundreds of workers.

Furthermore, all manual recordings had posted much difficulties, and resulting an extremely time consuming process, during factory audit in the area of workers' safety & compliance.

Generating and compiling compliance report is almost an impossible task, when all records are in written form.

Our Solution

BSCS were implemented in several of the client's plants, with incorporation of biometric authentication terminal.

BSCS will firstly, and accurately identify a worker, subsequently verify his/her personal record. Once all compliance are met, BSCS will grant access to the worker.

The solution does not only meet the client's required compliance requirements, it is also incorporated with other labor law compliance, such as maximum daily & weekly work duration compliance.

Administration & Reporting

BSCS provides web based administration & reporting functions. Accurate compliance reports are now used as references for factory audit.

Advantages of BSCS

BSCS is proven to be an ideal tool in monitoring & managing workers' compliance requirements accurately & responsively, which instantly solved workers' access bottleneck issue during change of shift.
